

List of Experiments – Database Management Systems Laboratory

1. Study of DBMS Architecture and Database Environment Setup
2. Implementation of Data Definition Language (DDL) Commands
3. Implementation of Data Manipulation Language (DML) Commands
4. Implementation of SQL Queries Using Joins and Subqueries
5. Implementation of Aggregate Functions and Grouping Operations
6. Design of Entity–Relationship (ER) Diagram and Relational Mapping
7. Database Normalization Using Functional Dependencies
8. Implementation of Views and Indexes
9. Implementation of Transaction Management and ACID Properties
10. Implementation of Concurrency Control Techniques and Deadlock Handling
